WORK EXPERIENCE

Technical Support Representative at Vodafone UK Alexandria in which I was responsible for supporting Vodafone customers with solutions for their technical issues, beside floor-walking and supporting new joiners, dealing with their concerns and running meetings.
📅 July 2019 - June 2021

PROJECTS

◯ ITI Graduation Project

Health-Club Web Application using React/Django
Physion-slim platform that gathers multiple branches with their offers, events, etc.. to make it easier to market their products and to notify their guests with the latest updates to explore the variety of those products. It has an authentication system that prevent fake accounts from using some of the application features by verifying their accounts using phone numbers.

◯ Movies Web Application

An application using ReactJS, Redux, and Axios for listing the latest moves through TMDB API's and managing favorites.

◯ Crwn-Clothing

An E-Commerce Web Application built using ReactJS, Redux Toolkit and firebase, that allows the user to add items to carts without the need to sign in/up. yet the purchase won't complete until the account is verified.

◯ Blog Web Application

A blog using Django to view and create posts. Users need to login to be able to post, like/unlike and comment/reply on posts. Searching by tags and posts' titles is also available. There is a filter to prevent forbidden words from being included in posts and comments.
Admins have the authority to block/unblock users, and they can make users admins as well.

◯ Todo Application

A Todo app built using vanilla JS, that allows you add/edit/delete tasks, comes with multiple color themes

◯ Database Management System

DBMS engine created using bash script files that are similar to SQL queries which run as commands.
